FIRE SAFETY

Version 3 : September 2019

This publication is for **Training Purposes Only**. It was developed based on the latest data available at the time of edition. This manual shall not be used as a reference for any maintenance practices and specifications and will not be updated. For authorized maintenance practices and specifications, consult the relevant maintenance publications. The contents of this manual is SAFRAN Aircraft Engine proprietary information. The manual is supplied in confidence and the commercial security of its contents must be maintained. Therefore, none of the information may be disclosed to other than the recipient. It shall not be used or reproduced without the express consent of SAFRAN Aircraft Engine, including, but without limitation, it shall not be used in the creation, manufacture, development or derivation of any repairs, modifications, spare parts, design or configuration changes or to obtain government or regulatory approval to do so. If consent is given for reproduction in whole or in part, this notice shall appear in any such reproduction in whole or in part.

This manual must not be used for any purpose other than that for which it is provided.

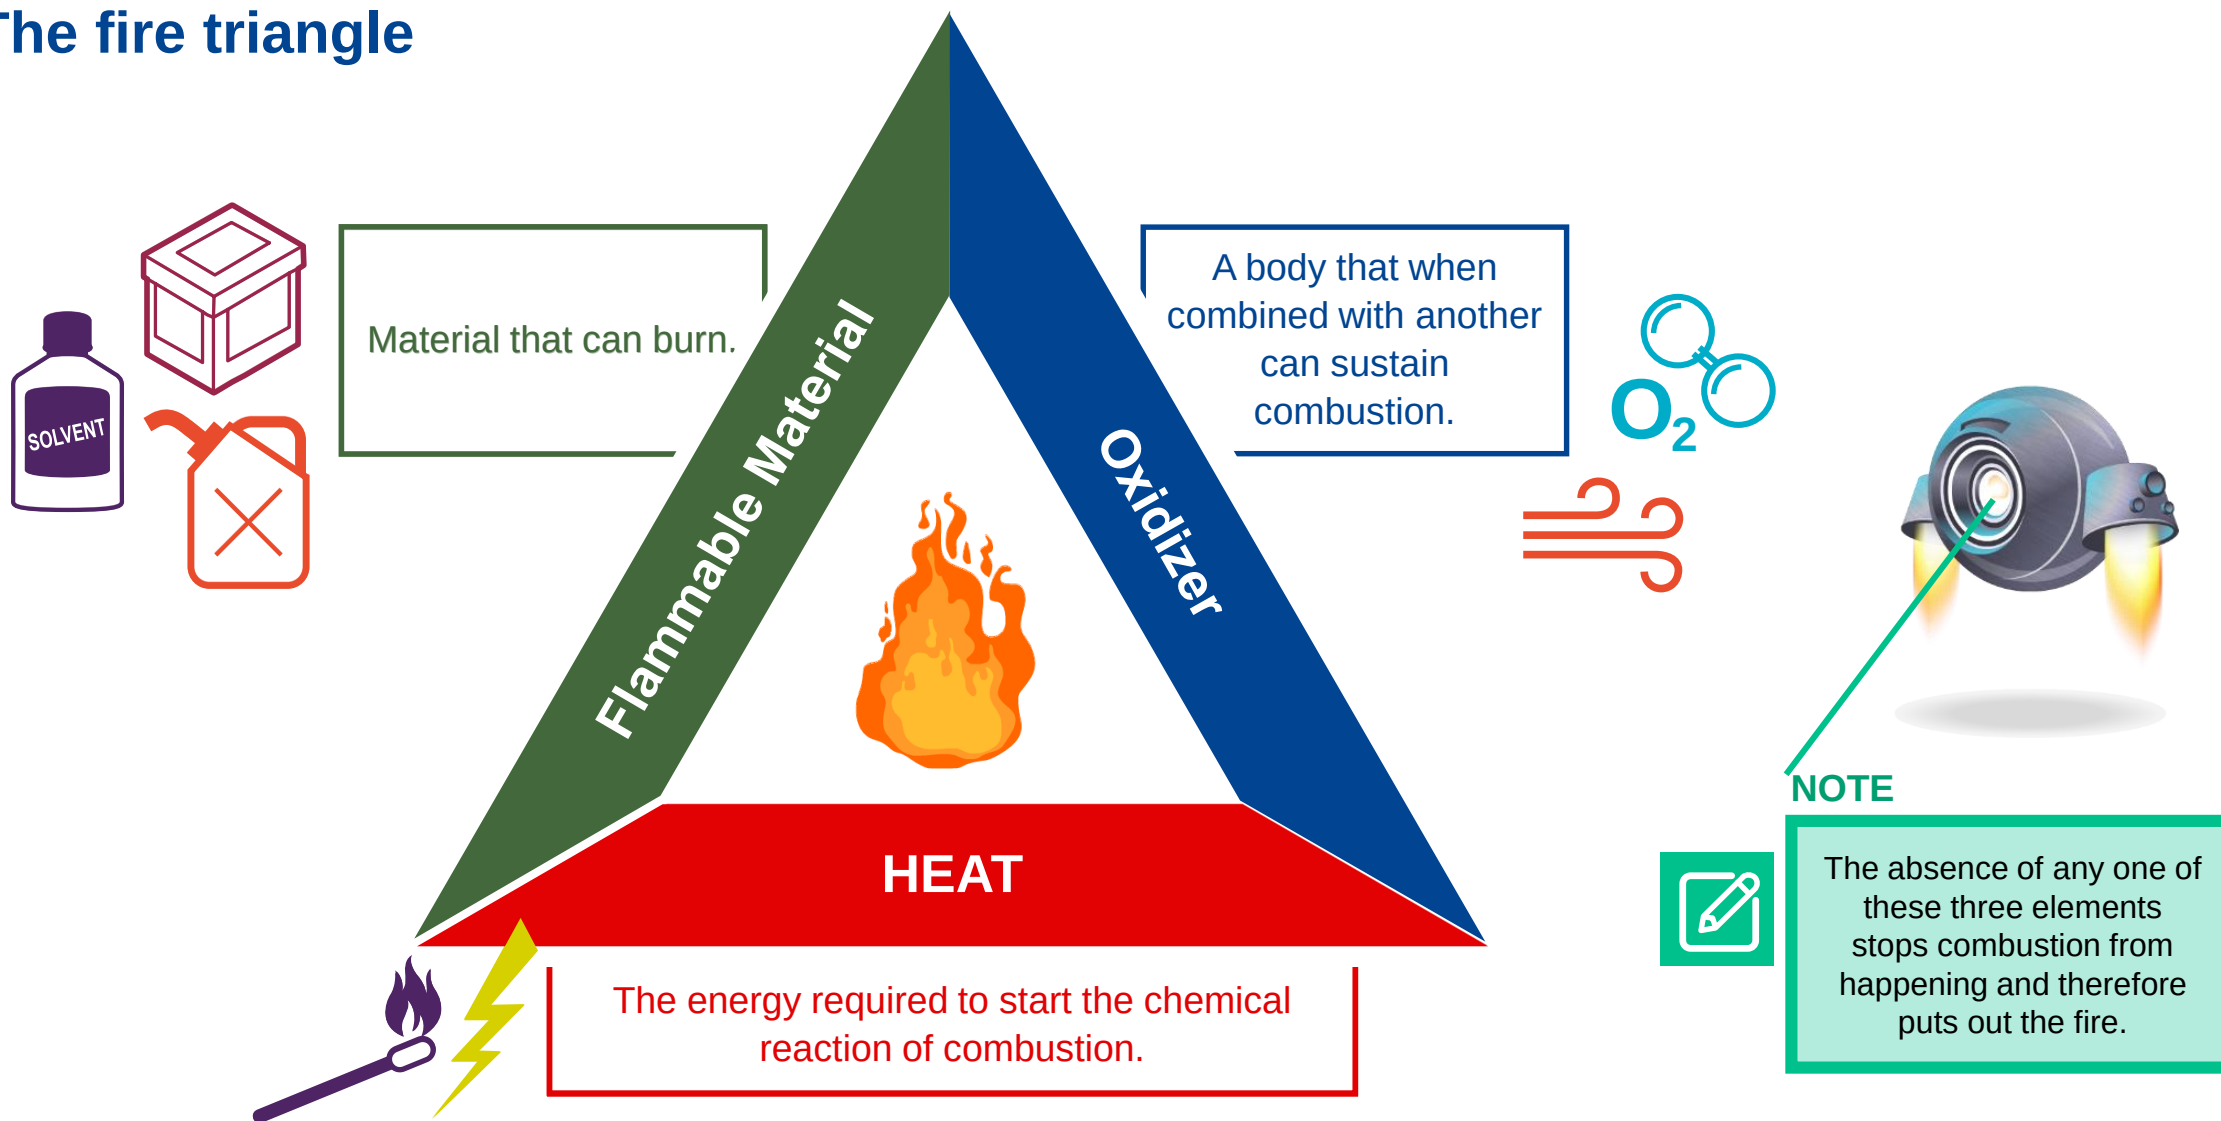

Contents

- 1 The fire triangle
- 2 Classes of fire
- 3 Fire risk
- 4 Classes of fire extinguishers
- 5 Behaviour in case of fire

Present the different
extinguishers to be
used for each type of
fire.

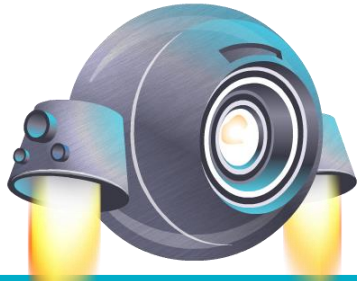

The fire triangle

What are the classes of fire that you know?

A

**COMBUSTIBLE
MATERIALS**

B

**FLAMMABLE
LIQUIDS**

C

**FLAMMABLE
GASES**

D

**FLAMMABLE
METALS**

Classes of fire: combustible materials

Fire with combustible materials, where combustion creates embers: wood, fabric, paper, rubber, certain plastics, PVC, etc.

Classes of fire: flammable liquids

Flammable liquids or liquefiable solids: petrol, kerosene, oil, grease, isopropyl alcohol, pitch, polyethylene, polystyrene, etc.

Classes of fire: flammable gases

Propane, butane, town gas,
acetylene...

Classes of fire: flammable metals

Flammable metals: Sodium, magnesium, aluminium, uranium, iron dust, sodium chlorate...

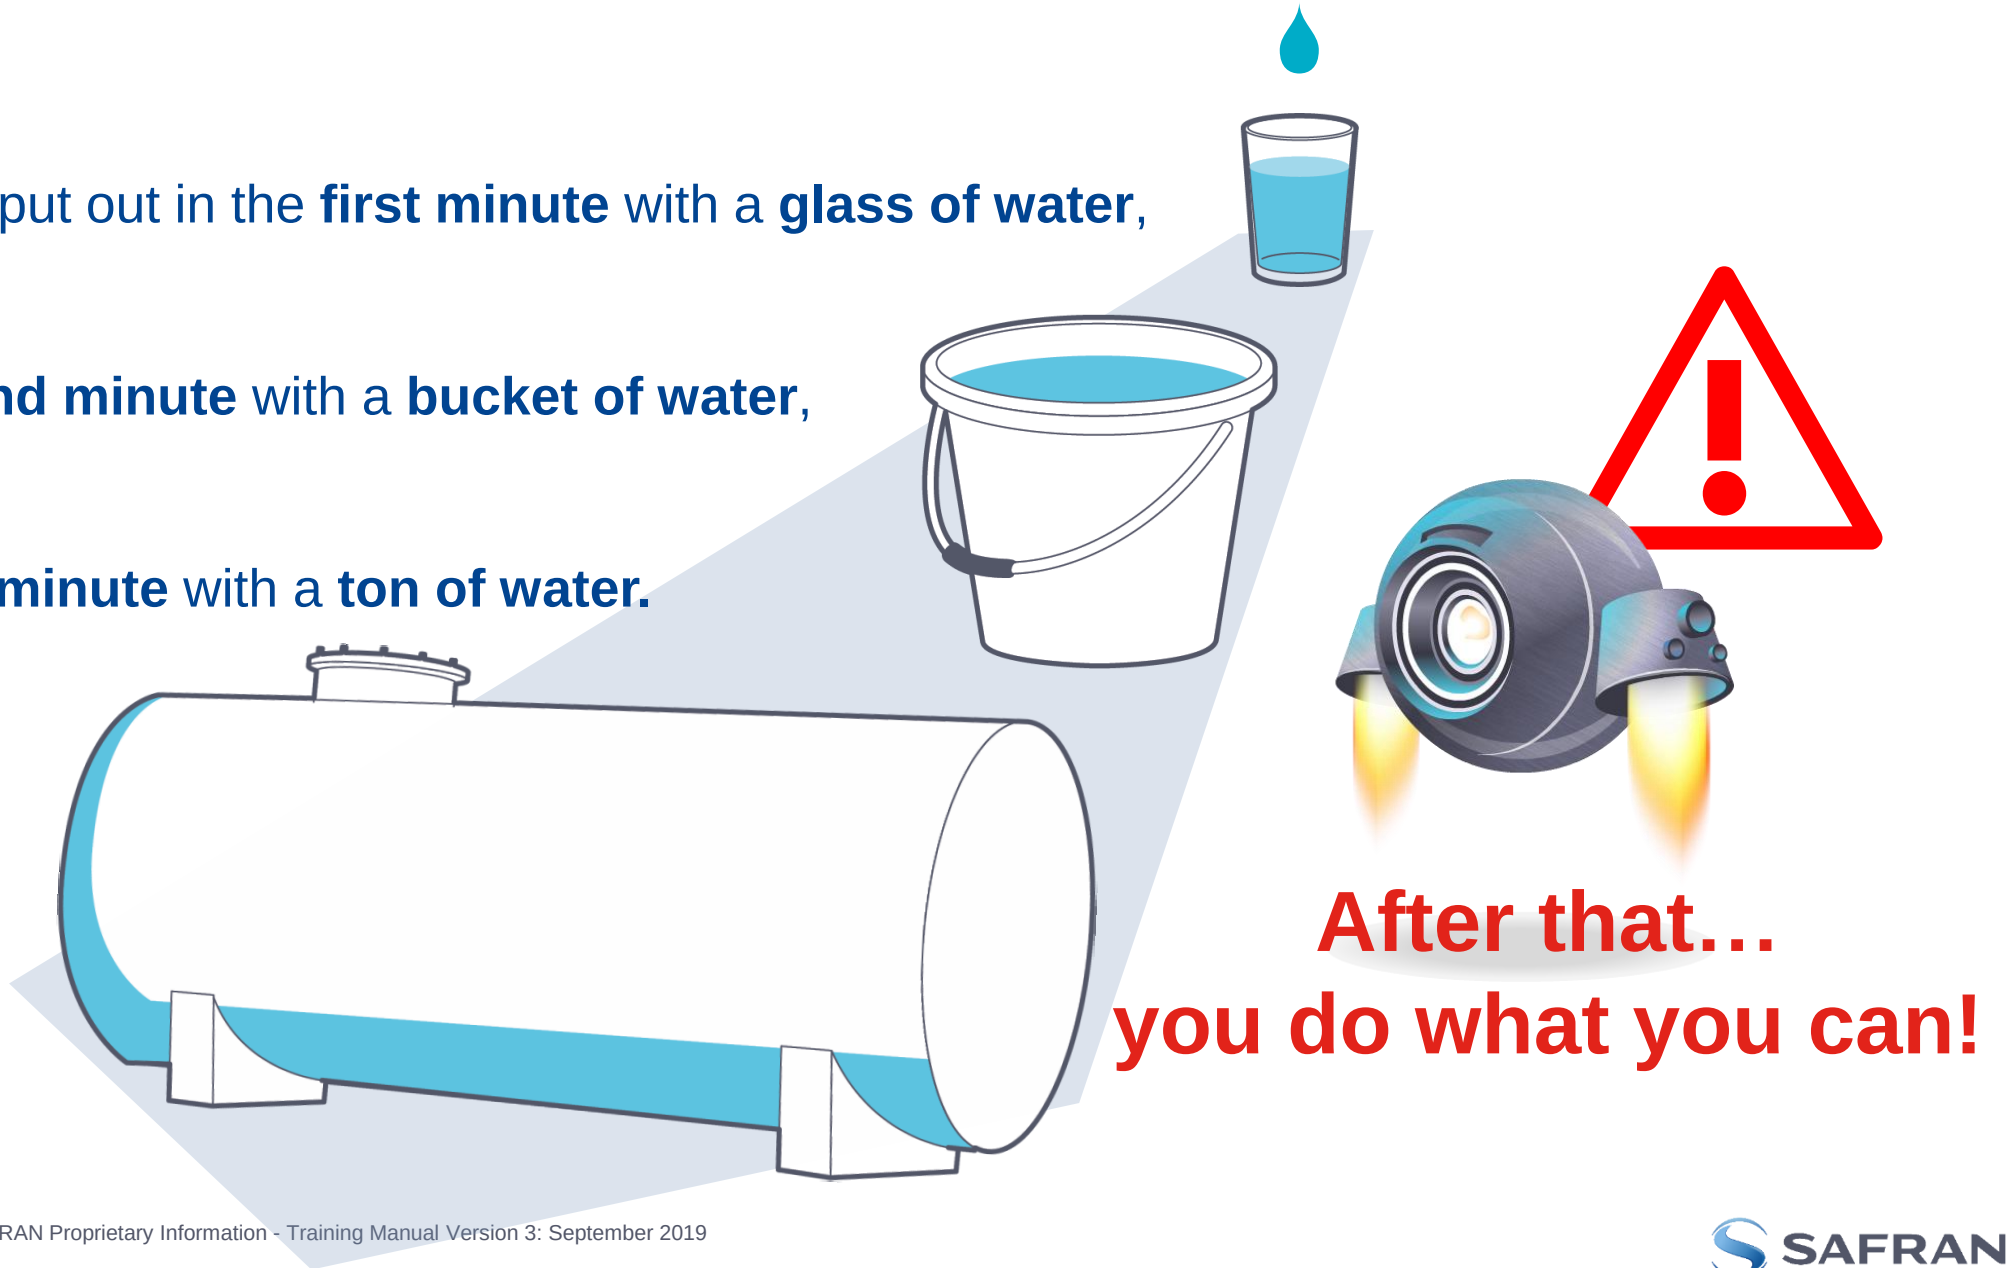

Fire risk

Fire can be put out in the **first minute** with a **glass of water**,

in the **second minute** with a **bucket of water**,

in the **third minute** with a **ton of water**.

Classes of fire extinguishers

What are the classes of fire extinguishers that you can find in the workshop?

Water spray
extinguisher with
additives

ABC powder
extinguisher

Compressed liquefied
carbon dioxide (CO₂)
extinguisher

Halogen hydrocarbon
(Halon) extinguisher

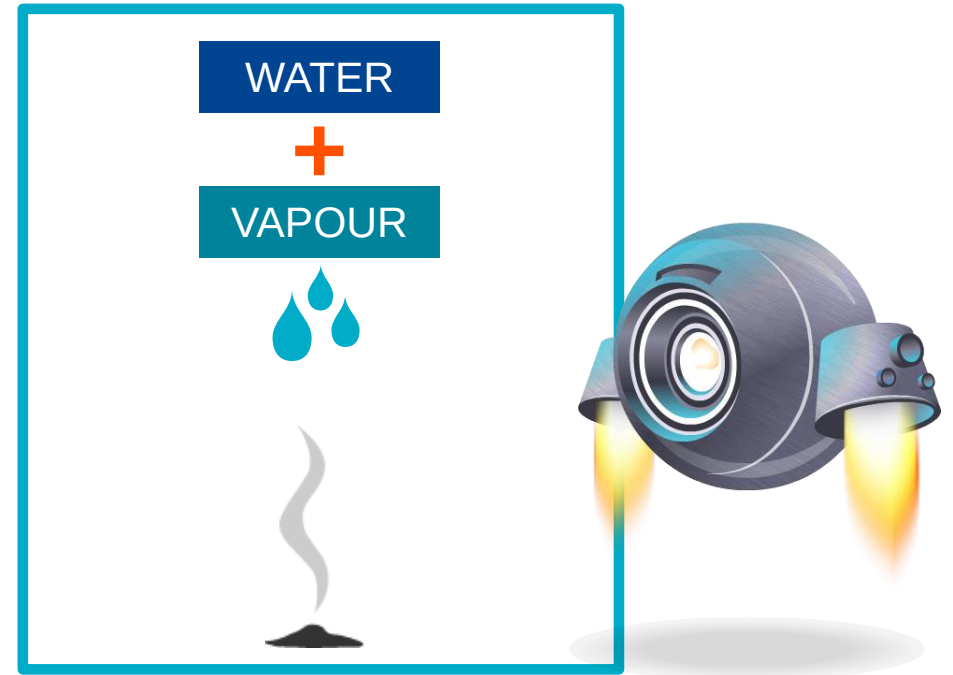

Classes of fire extinguishers

Water spray extinguisher with additives:

ACTION

Direct action
by smothering the fire
(water and formation of
steam).

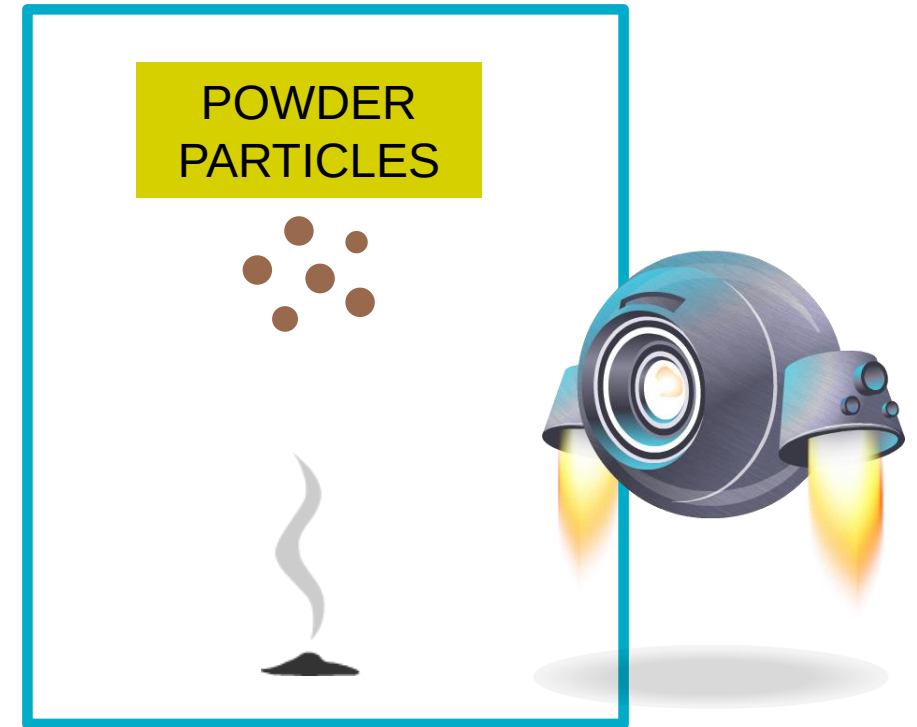

Classes of fire extinguishers

ABC powder extinguisher:

ACTION

Absorption of heat
through powder particles.

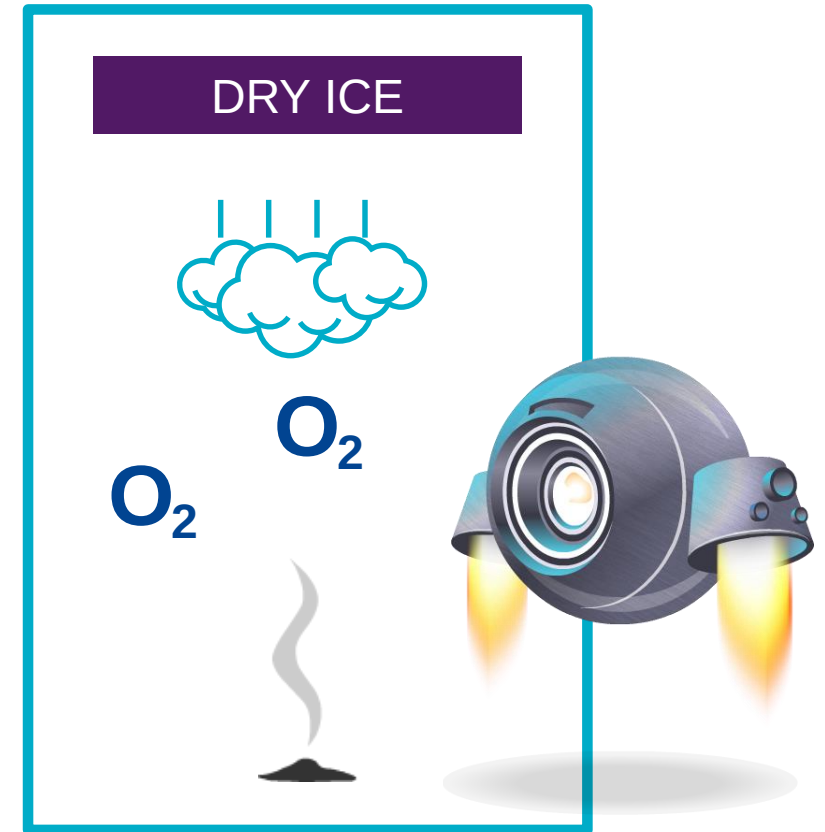

Classes of fire extinguishers

Compressed liquefied carbon dioxide (CO₂) extinguisher:

ACTION

Cools as gas expands (which creates « dry ice »). Decrease in oxygen level.

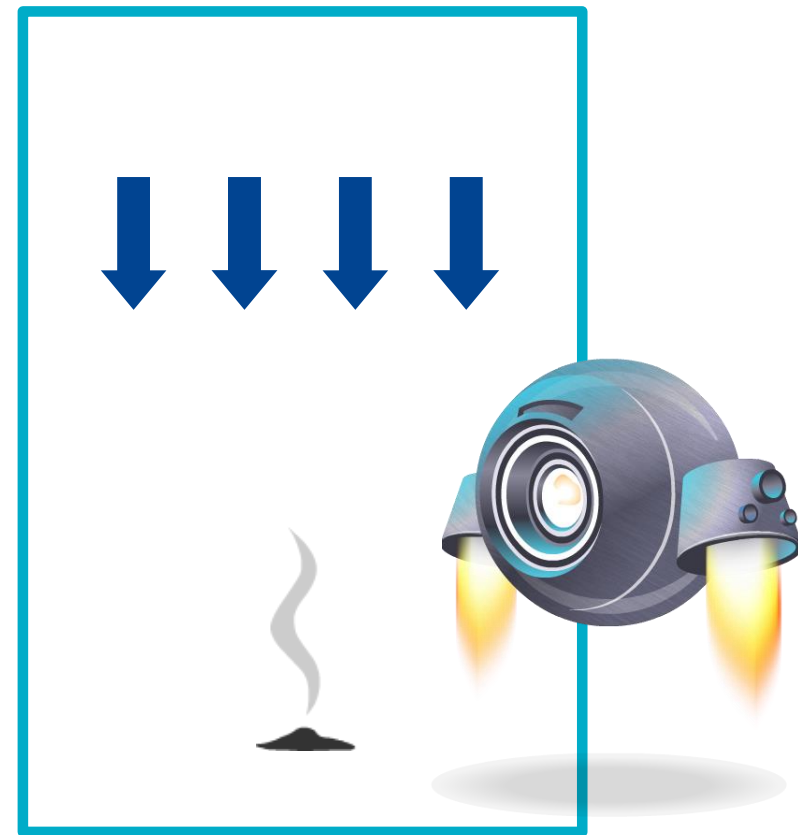

Classes of fire extinguishers

Halogen hydrocarbon (Halon) extinguisher:

ACTION

Inhibits combustion reactions.

Behaviour in case of fire

1

Stay calm

2

Raise the alarm by whatever means at your disposal: call for help, telephone, break glass fire alarm...

3

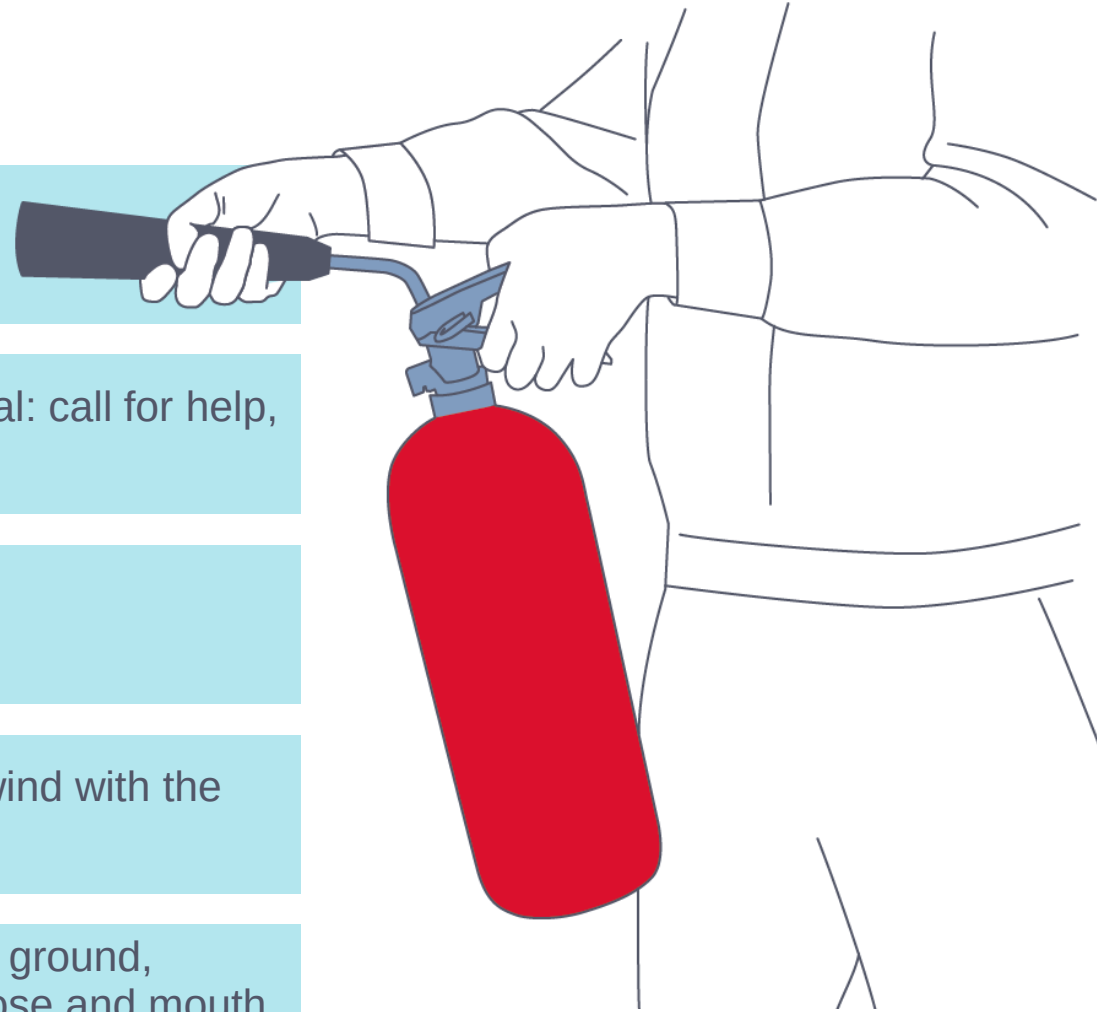

Call the fire service

4

Fight the fire at its base and with your back to the wind with the appropriate extinguisher

5

In case of smoke, get down. Cool air is close to the ground, protect yourself with a wet handkerchief over the nose and mouth (80 % of fire casualties are from smoke intoxication)

Thank you for your participation.
